JAGUARSport XJR-S 6.0 LITRE V-12 - ENGINE OIL SPECIFICATION

In Service Bulletin JS-SB 3/89 dated November 1989, we confirmed our reasons for specifying the exclusive use of CASTROL SYNTRON-X 5W/50 motor oil in XJR-S 6.0 litre V-12 engines.

Castrol have recently introduced a new improved and uprated 10W/60 viscosity of SYNTRON-X which supersedes the 5W/50 grade, and this new oil is being introduced progressively to all major markets.

It is not recommended that CASTROL SYNTRON-X is mixed with other makes or types of oil although the 10W/60 grade is totally miscible with 5W/50 grade and if necessary can be mixed.

Commencing from the first 1000 miles (1500KM) service and at subsequent regular Jaguar service intervals and top-ups, JaguarSport XJR-S 6.0 litre V-12 engines should be filled using CASTROL SYNTRON-X 5W/50 or 10W/60 motor oil.

An information label situated on the engine oil filler cap refers to this requirement, additionally reference is printed in the XJR-S 6.0 litre Handbook Supplement on the Forecourt Data Card.

In certain overseas markets these oils are also marketed using the branding CASTROL FORMULA RS and CASTROL SYNTRON.

In addition to availability from your local Castrol supplier, this oil can also be supplied through the parts department at JaguarSport quoting part number SPM 9029, 25 litre drums.
